Job Portal

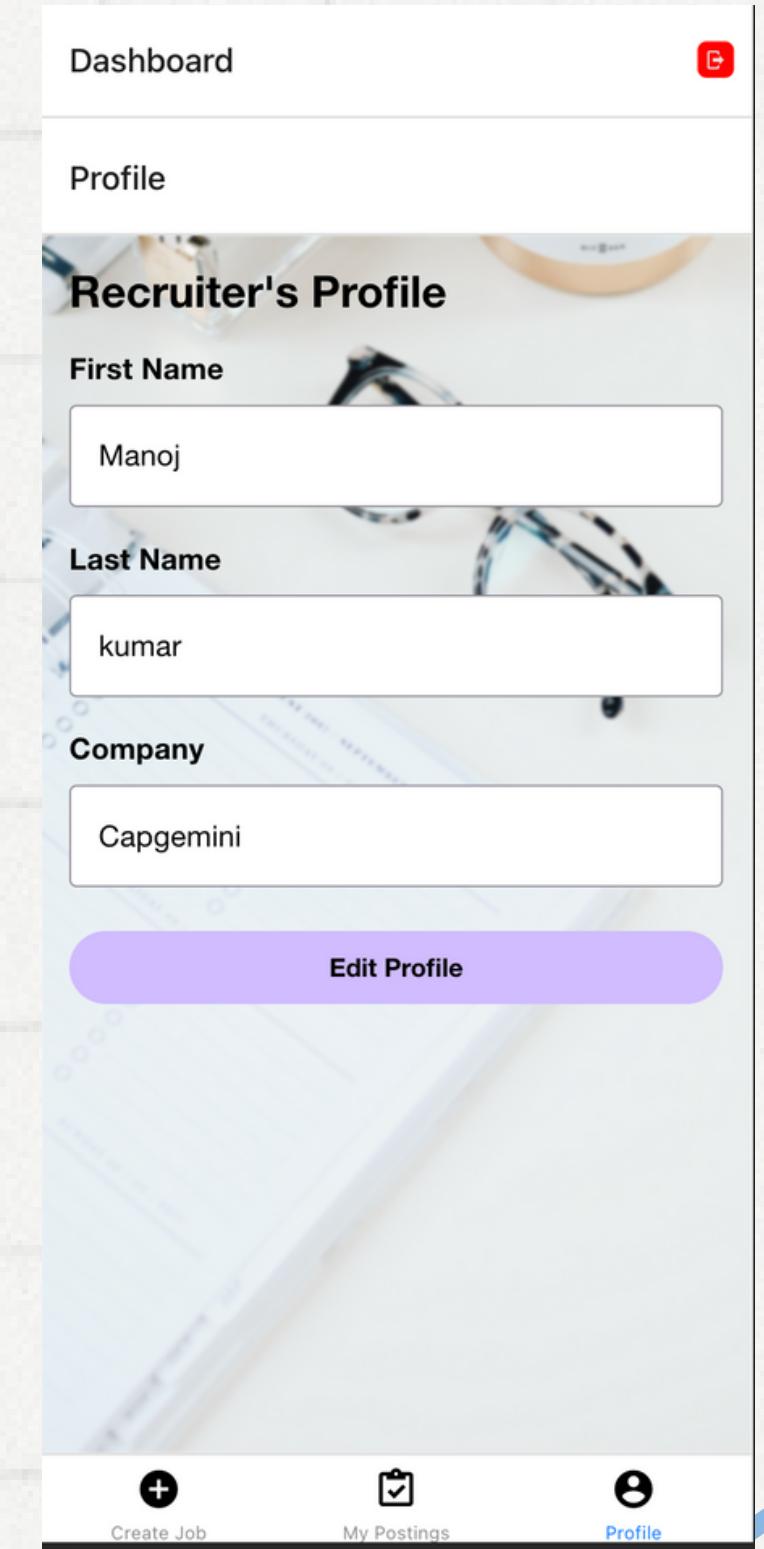

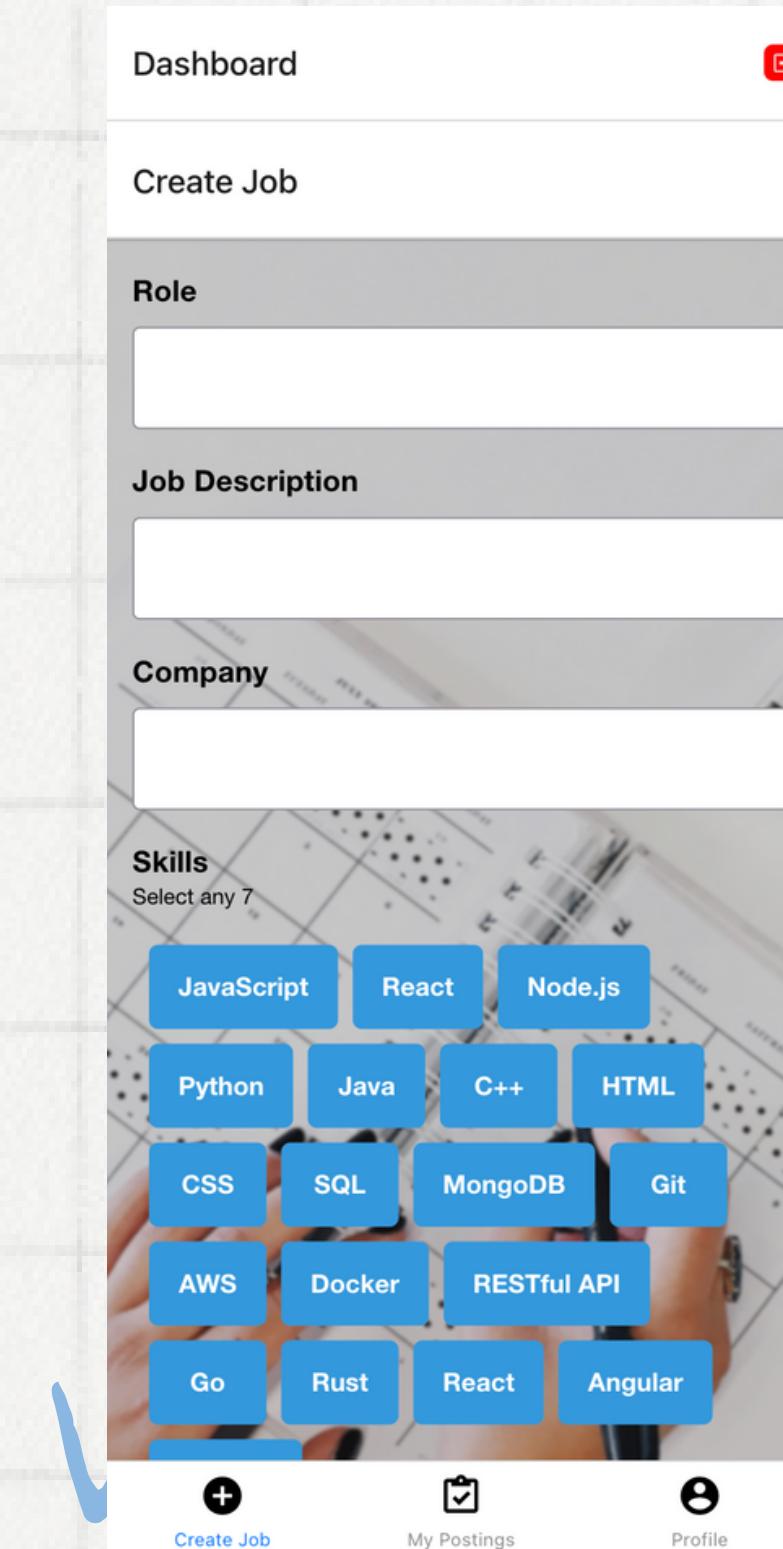

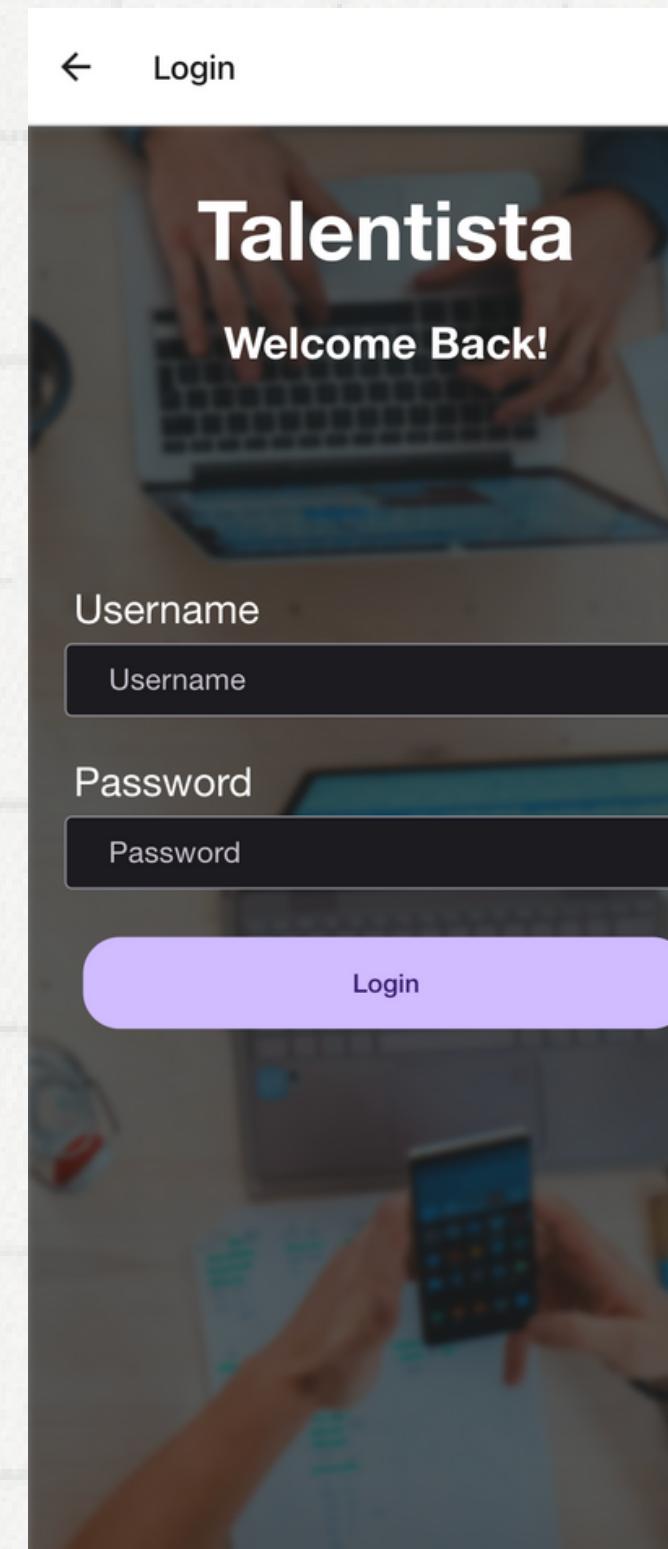

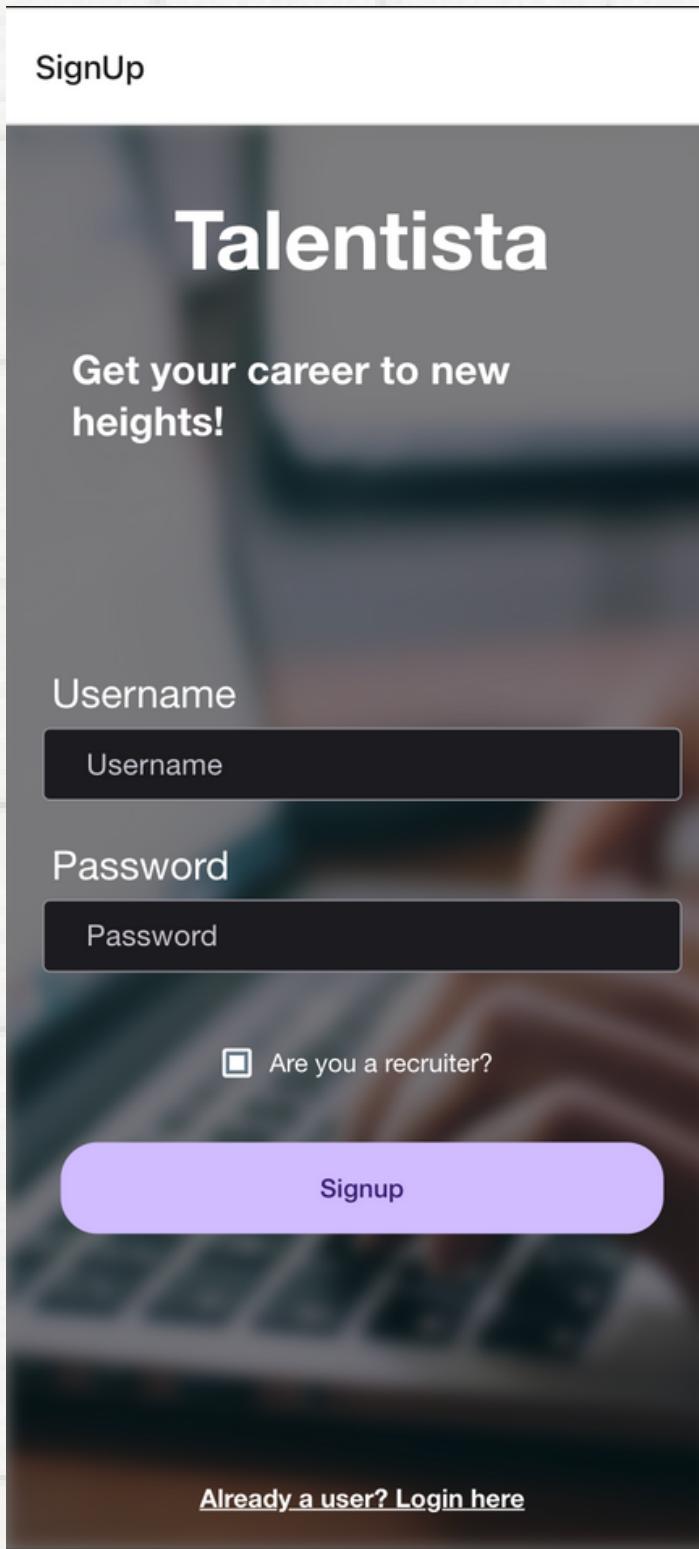

Talentista is a dynamic and user-friendly job portal that caters to both employers and employees, streamlining the recruitment process for optimal efficiency. Employers benefit from a range of features, including the ability to effortlessly post job listings, review and contact applicants, manage posted jobs with options to delete or update, and maintain an updated and comprehensive profile. On the employee side, Talentista offers a seamless experience for job seekers who can apply to positions, browse available jobs, and update their profiles with skills and qualifications. The platform ensures a mutually beneficial interaction between employers and employees, fostering a productive and user-centric environment for the entire job-seeking and talent acquisition process.

Challenges of Project

- Design of the database from scratch based on the use cases in Job Portal
- State management in Native app.
- Since React Native is does not directly communicate with Database, we had to create a Node.Js web server using Express that acted as a middleware to route requests from Frontend to MongoDB.
- Understanding and implementing the overall UI layout and how to make it more user-friendly in terms of Employer and Candidate.
- Multiple layers of navigation (Stack navigation nested inside Tab navigation inside Stack)
